RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 114 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . by aid of (2) and (3), is $v \text{ vdx}^3 \text{ v}^3 \text{ dxg} \text{ vtdxf} \text{ 0}$. (8) Consider now in order the previous cases. I. If x_i satisfy a single equation (6), we have By comparison of (8) and (9) we have $pf, . r--$, which shows CX_i that v_i are the coordinates of the tangent to 0 at the point x_i . II. If x_i satisfy the two equations (7), we have A comparison with (8) gives $pvis -i$ which shows that $CX \text{ CXr} \text{ v}_i$ passes through the line of intersection of the tangent planes to $f_1 \text{ 0}$ and 2 0 and hence is tangent to the curve denned by the two surfaces. III. If the points x_i are discrete points, we may say that each plane of the extent is tangent to the point, through which it passes, thus extending the use of the word tangent in a manner which will be useful later. Summing up, we say: A two-dimensional extent of planes consists of planes which are tangent either to a surface or to a curve or to a point. The theorem has reference, of course, only to the neighborhood of a plane of the extent. The entire extent may have the same nature throughout or different natures in different portions. 89. Change of coordinates. A tetrahedron of reference and a set of coordinates x_i having been chosen, consider any four planes not meeting in a point the equations of which are $V_1 \text{ V} \text{ V}^3 \text{ A}$, the...
